

# Commercial Tax Credit Certificate

The Emergency Economic Stabilization Act of 2008, H.R. 1424, contains long-term tax incentives to encourage the use of renewable energy technologies in businesses that support the installation of highly-efficient heating, cooling, and water heating systems, such as geothermal heat pumps until the year 2016.

The new law offers a one time credit of 10% of the total investment without a maximum credit limit for a commercial installation.

Please complete the information below, and keep this certificate for your records. We advise previous consulting with your tax advisor for further information.
