

AVAILABLE Q2 2007

**Integrated Security With Simple,
Web-Based Management**

Easy Management With WEBs^{AX} Security

Because WEBs^{AX} Security features Internet-based software, you'll be able to manage your security system anytime from anywhere you have Internet access. You can check the security status, make updates, change access privileges and more with just a few clicks.

From access control to alarm management, everything you need is in one easy-to-use system.

Pre-defined reports are available in easily understandable formats, reducing the need for training.

Custom graphics allow you to incorporate your facility's floor plan and equipment to present a realistic display of your system.

Cost-Effective

WEBs^{AX} Security offers modular control, so you only need to install the devices you wish to use without extra components that don't relate to your company's needs. Plus, if you already have security peripherals — door strikes, glass-break monitors, card readers, etc. — in place, you won't have to buy new equipment to utilize WEBs^{AX} Security. It has the flexibility to work with standard security products and tie them together into a system with easy-to-use and easy-to-access control.

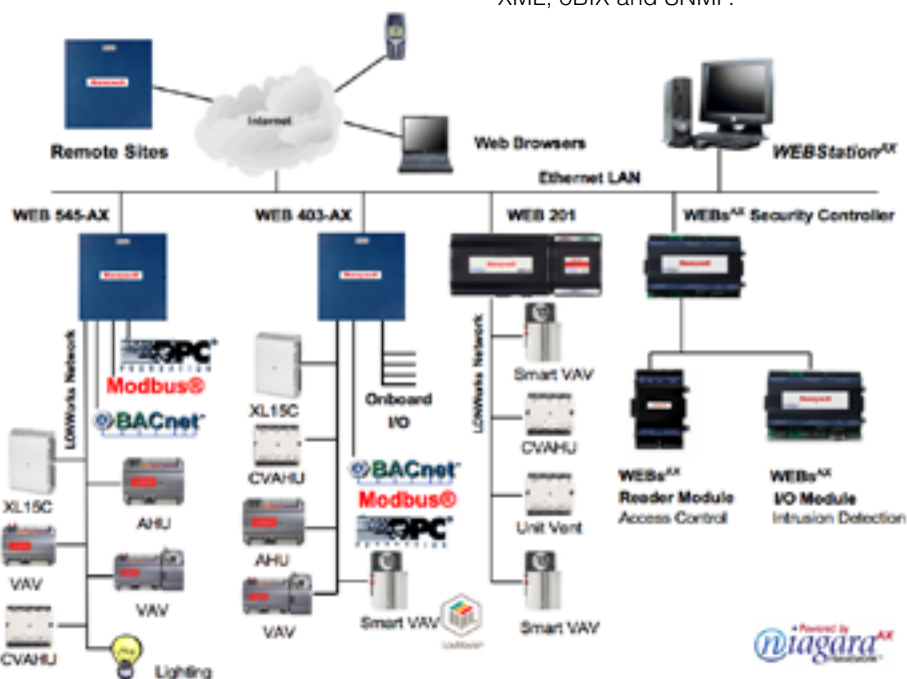

Complete, Seamless Integration

When used with the WEBs^{AX} system, WEBs^{AX} Security goes beyond its security functions to help you save energy. Through integration with HVAC, lighting and energy management systems, WEBs^{AX} Security helps you reduce energy costs through occupancy monitoring integrated with the automation system.

For instance, in most buildings when an employee comes in after hours, the lights and HVAC system get turned on for the entire building or floor. With WEBs^{AX} Security integrated with the automation system, when the employee's access card is recognized, only the lights and HVAC system that pertain to that employee's work area can be activated, saving energy costs throughout the rest of the building. Plus, when the employee leaves, the system returns to its off-hours settings, so you won't have the extra costs incurred by employees forgetting to turn off lights or turn down thermostats.

Share Information

You can get the most from WEBs^{AX} Security by integrating it into a WEBs^{AX} system, but it's designed to work on its own if needed to fit your needs. Along with the flexibility that WEBs^{AX} Security offers to use third-party devices, it also offers the flexibility to share information on the enterprise level. WEBs^{AX} Security connectivity includes standard IT protocols as well as XML, oBIX and SNMP.
